

Service Manual

4/2-CHANNEL RECORD/PLAYBACK 8-TRACK CARTRIDGE DECK

This model is an improved type of model RS-858US shipped previously. Because some drawings common to both models are omitted in this service manual, please refer to the service manual of model RS-858US together.

This is the Service Manual of Model RS-858DUS for PX.

MODEL RS-858DUS

SPECIFICATIONS

Power Source:	AC: 90~109, 110~125, 200~219, 220~250 volts, 50/60 Hz	Inputs:	4 MIC: Sensitivity 0.15 mV/applicable microphone impedance 200~600 Ω
Power Consumption:	12 W		4 LINE: Sensitivity 45 mV/100 K Ω
Motor:	Electronic speed control motor	Outputs:	4 LINE: Output level 0.8 V/load impedance 50 K Ω over
Track System:	8-track, 4-channel/2-channel stereo recording and playback		2 HEADPHONE: Output 60 mV (max.)/8 Ω
Recording System:	AC bias, AC erase	Program Time:	30 minutes 4-channel stereo recording with 300 feet tape
Tape Speed:	3-3/4 ips.	REC/PB Connection:	5 P DIN type (EIAJ)
Fast Forward Time:	Approx. 450 seconds with 300 feet tape	Dimensions:	21-1/8" (W) \times 4-3/4" (H) \times 11-1/4" (D)
Frequency Response:	30~15,000 Hz	Weight:	20-3/4 lbs.

These specifications are subject to change in order to accommodate improvements in design.

4/2-CHANNEL RECORD/PLAYBACK 8-TRACK CARTRIDGE DECK

This is the Service Manual of Model RS-858US for PX.

MODEL RS-858US

SPECIFICATIONS

Power Source:	AC: 90~109/110~125/200~219/ 220~250 volts, 50/60 Hz	Frequency Response:	30~15,000 Hz
Power Consumption:	Approx. 55 W	Inputs:	4 "MIC" -71 dB (0.28 mV)/applicable mic impedance 200~600 Ω 4 "LINE" -25 dB (56 mV)/100 K Ω
Motor:	AC outer rotor motor	Outputs:	4 "LINE" -2 dB (800 mV)/3.3 K Ω "HEADPHONES" 8 Ω
Track System:	8-track, 4-channel stereo recording and playback	Program Time:	30 minutes stereo recording at 3-3/4 ips. with 300 feet tape
Recording System:	AC bias, AC erase	Dimensions:	21-1/8" (W) \times 4-3/4" (H) \times 11-1/4" (D)
Tape Speed:	3-3/4 ips.	Weight:	20-3/4 lbs.
Fast Forward Time:	Approx. 100 seconds for 100 feet tape		

These specifications are subject to change in order to accommodate improvements in design.

DISASSEMBLY INSTRUCTIONS

HOW TO REMOVE BOTTOM PLATE

1. Remove 10 bottom plate holding screws (A).
2. Then bottom plate can be removed.

HOW TO REMOVE CHASSIS AND PANEL

1. Remove 2 body case holding screws (B) and 4 chassis holding screws (C).
2. Remove the chassis by pulling it out to the panel side.
3. Remove 3 panel holding screws (D) and 5 panel holding screws (E).
4. Remove 4 control knobs (F) and 1 selector knob (G).
5. Then panel can be removed.

MECHANICAL ADJUSTMENTS

PROGRAM SELECTION

Fig. 5

Fig. 6

Fig. 7

Manual Selection

1. When the push switch is pressed, the plunger operates.
2. The plunger pulls the change arm to left momentarily: then it returns to the right.
3. Change arm moves the ratchet plate which turns the cam when it returns to the right.
4. As the cam rotates, the head moves up and down and the program is selected.

Fig. 7 shows a cross-section of the cam. The convex portion of the operating arm hits upon surfaces 1, 2, 3, and 4. When it hits upon surface 4 the head is placed in top position selects program 1.

Automatic Selection

If the sensing foil is attached to the cartridge tape, the plunger functions when the sensing switch is closed by the sensing foil, thereby selecting a program can be made automatically.

PRESSURE OF PRESSURE ROLLER

Fig. 8

Instruments required: Standard cartridge for measuring pressure of pressure roller; spring scale.

Measuring figure: Refer to fig. 8.

Measuring method: Insert the standard cartridge in the tape player, and take the measurement by pulling it with the spring scale.

Standard value:

1750 ± 250 gr.

HEAD ARM ATTRACTION

Fig. 9

Instrument required: Spring scale.

Measuring figure: Refer to fig. 9.

Measuring method: Place the set in to the mode of program 1, and take the measurement by pushing it downward with the spring scale.

Standard value:

180 ± 20 gr.

PLUNGER LOAD

Instrument required: Spring scale.

Measuring figure: Refer to fig. 10.

Measuring method: Apply the spring scale, push in the

plunger, and measure the maximum value at the end point.

Standard value: 800 ± 200 gr.

AMPLIFIER ADJUSTMENTS

HEAD HEIGHT POSITION CONTROL AND AZIMUTH ADJUSTMENT

Instrument required: VTVM.

Azimuth and height position control cartridge (VTT801). Crosstalk adjustment standard tape (VTT804).

HEAD POSITION CONTROL

1. Place the set into program 1.
2. Make an adjustment with the unaided eye by using the head height adjust screw (A) shown in fig. 12.

so that the tape width and the head position becomes as shown in fig. 11.

AZIMUTH ADJUSTMENT

1. Set the tape player to program 2.
2. Connect a VTVM to the output of right channel in fig. 13.

3. Using either an VTT801 test tape or recorded music tape, play the tape and adjust screw B in fig. 12 for a maximum output.

HEIGHT ADJUSTMENT

Fig. 14

Fig. 15

Fig. 16

NOTE

TEST TAPE VTT801 is recorded with a 1 kHz tone above and below track 2. When adjusting, if the tone gets louder, adjust for minimum by the turning adjustment screw in the opposite direction.

1. Set tape player to program 2.
2. Play the tape and adjust screw (fig. 12) for minimum sound on left channel or connect the equipment as shown in fig. 15.

CROSSTALK ADJUSTMENT

NOTE

Test tape VTT804 has 400 Hz on track 1, 3, 5, and 7, and no signal on track 2, 4, 6, and 8.

1. Using the VTVM, play each channel and measure the power ratio between each odd and even numbered track. It should be at least 35 dB.
2. If the power ratio is out of tolerance, repeat the azimuth and height adjustments.
3. Lock screws A and B in place, using glyptal or glue, Shown in fig. 12.

STANDARD VALUE TO TEST

	ITEM	VALUE	PARTS TO BE ADJUSTED	REMARKS
1	Erase current.	0.17 V	VR7	VTVM to both ends of R71 (10 Ω).
2	Recording level.	1 kHz MIC -71 ± 4 dB AUX -25 ± 4 dB	—	To obtain 50 μ A of recording current through the recording head. Stop the bias oscillation by unsoldering the wire (A) as shown on printed circuit board (page 11).
3	Recording level indicator.	0 VU on level indicator.	VR5, 6, 5', 6'	The same as above.
4	Playback amplifier gain.	-71 ± 4 dB at 1 kHz	VR1 (for CH1) VR2 (for CH2) VR1' (for CH3) VR2' (for CH4)	—
5	Bias oscillation frequency.	35 ± 5 kHz	—	Adjust the AF OSC to obtain a circular and stationary Lissajous' pattern on oscilloscope. The oscillation frequency is indicated by the scale of the AF OSC.
